MCW INSTALLS A NATION WIDE, FULLY INTEGRATED VOICE AND TELECONFERENCING SYSTEM

MCW installs a fully integrated, nationwide VOIP and Teleconferencing Phone system for Overwatch Geospatial

Ashburn, VA – December 1, 2009: MCW installs a multi-site integrated VOIP phone system and High Definition Video Teleconferencing solution for Overwatch Geospatial. With locations across the United States, Overwatch was in need of a solution provider that could integrate secure Video Teleconferencing and a VOIP Phone System. MCW designed, built and installed a budget conscience, fully integrated system from Shoretel and Polycom with features such as: multi-location 3-digit direct dialing, Unified Communication Platform, Instant Presence notification capabilities and more. All locations are fully equipped and integrated on a private network to ensure secure communication and confidentiality.

Beginning at Overwatch's headquarters in Northern VA, 94 phones were installed, their second location, in Montana, received 25 phones and their third location, in Massachusetts, received 20 phones. All locations are linked together on a private network where videoconferencing and phone conversations are fully secured. The fully integrated system comes equipped with inverse multiplexer hardware designed to establish the difference between voice and video and distribute the appropriate bandwidth for each. This type of hardware allows Overwatch to save money on the amount of bandwidth necessary for each location.

###

MCW Solutions, LLC was founded in 2003 to meet the demand for a single integrator to provide turnkey systems in support of Telecom, Security and Audio/Video applications. MCW's methodology starts at the physical layer on the technology stack with telecommunications wiring and moves through all phases including the transportation and application layers providing Security, Access Control, Closed Circuit Television, and Pro-Audio/Visual Systems.
