MCW CREATES HIGH TECH AUDIO/VISUAL SOLUTION FOR NEW COLOSSAL CATHOLIC CHURCH

Ashburn, Virginia's new Colossal Catholic Church Opens its Doors with one of the Biggest and Best Sound Systems in the Area

Ashburn, VA – December 1, 2009: The newly built, St. Theresa's Catholic Church in Ashburn, VA, receives extensive, high tech Audio/Visual solution from MCW Solutions, LLC. With six Renkus-Heinz Line Array Speakers, this church is equipped with one of the areas biggest and best sound systems. The Renkus-Heinz speakers are controlled by a touch-screen module for the optimal user-friendly sound system. With a simple stroke of your finger, you can adjust the sound direction of each individual speaker that lie inside of the Renkus-Heinz Line Array Speakers.

The biggest challenge faced with the Catholic Church was the massive cathedral ceiling. Worship houses, like St. Theresa's Catholic Church, must have impeccable sound for both speech and music. To ensure the crispness and clarity of speech throughout the cathedral, MCW created a suitable voice reinforcement system, and the appropriate musical acoustics were achieved through careful selection of speakers and microphones.

The most important aspect of this particular solution is establishing the level of ease required to use the system. From the touch screen computers to control the speakers, to the pre administered microphone system, this system is incredibly user friendly and intuitive.

####

MCW Solutions, LLC was founded in 2003 to meet the demand for a single integrator to provide turnkey systems in support of Telecom, Security and Audio/Video applications. MCW's methodology starts at the physical layer on the technology stack with telecommunications wiring and moves through all phases including the transportation and application layers providing Security, Access Control, Closed Circuit Television, and Pro-Audio/Visual Systems.
